About This Guide

XonTel XT-800FXO Analog VoIP Gateways are cutting-edge products that connect legacy telephones, fax machines and PBX systems with IP telephony networks and IP-based PBX systems. Featuring rich functionalities and easy configuration, XT-800FXO is ideal for small and medium enterprises that wish to integrate a traditional phone system into IP-based system. XT-800FXO helps them to preserve investment on legacy telephone system and reduce communication costs significantly with true benefits of VoIP.

Audience

This manual will help you learn how to operate and manage your XT-800FXO Gateway. In this guide, we describe every detail on the functionality and configuration of XT-800FXO Gateway. We begin by assuming that you are interested in XT-800FXO Gateway and familiar with networking and other IT disciplines.

Safety when working with electricity

- Do not open the device when the device is powered on.
- Do not work on the device, connect or disconnect cables when lightning strikes.

Features Highlights

- 8 FXO ports
- Fully compliant with SIP and IAX2
- Flexible calling rules
- Configurable VoIP Server templates
- Codec: G711 a/u-law, G722, G723, G726, G729A/B, GSM, ADPCM
- Echo Cancellation: ITU-T G.168 LEC
- Web-based GUI for easy configuration and management
- Excellent interoperability with a wide range of IP equipment

Getting Started

In this chapter, we guide you through the basic steps to start with a new XT-800FXO Gateway:

- Accessing Web GUI
- Web Configuration Panel
- Application Description

Accessing Web GUI

The default IP address for XT-800FXO Gateway is: 192.168.5.150. In this situation, one IP address within segment 192.168.5.0/255.255.255.0 requires to be added in network settings for your computer. So that you could access the IP address 192.168.5.150.

After entering the IP address in the web browser, users will see a log-in screen.

Check the default settings below:

Username: admin

Password: xontel

Figure 2-1 XonTel XT-800FXO Gateway Login page

Web Configuration Panel

There are 4 main sections on the Web Configuration Panel for users to check the XT-800FXO Gateway status and configure it.

- **Status:** check System Status, Port Status, Trunk Status, Network Status and check call logs, system logs.
- **System:** configure Network Settings, Security related Settings, System Date and Time, Password, Backup and Restore, etc.
- **Gateway:** configure FXO ports, gateway settings and SIP settings, etc.
- **Logout:** log out XT-800FXO.

Note:

After saving the changes, remember to click the “Apply changes” button on the upper right corner of the Web GUI to make the changes take effect.

Application Description

Connect IP PBX and XonTel XT-800FXO Gateway

XonTel XT-800FXO gateway is a solution to extend FXO ports for your PBX. Two modes are available for you to connect PBX and XonTel XT-800FXO gateway, we call them VoIP mode and SPS (Service Provider SIP)/SPX (Service Provider IAX) mode. Three modes are available for you to connect your SIP server and XT-800FXO Gateway. We call them SIP Account Mode, VoIP Mode and SPS (Service Provider SIP) Mode. You can choose any one of the 3 modes to connect your SIP server and XT-800FXO Gateway. SPS Mode is recommended.

Account Mode:

Create one SIP account on XT-800FXO Gateway, and take the SIP account to register one SIP trunk on your SIP server. Then XT-800FXO Gateway and your SIP server are connected by the account.

➤ **Calls from SIP to PSTN**

- 1) Create one outbound route on your SIP sever, and select the SIP trunk you have registered just now.
- 2) Configure a “IP->Port” route on XT-800FXO Gateway, choose the SIP account in the field “Call Source”, and choose a PSTN trunk or PSTN trunk group in the field “Call Destination”.
- 3) Make a call from your SIP Server and the call should match the outbound

route dial rules.

➤ **Calls from PSTN to SIP**

- 1) Create an inbound route on your SIP server, and select the SIP trunk you have registered just now.
- 2) Configure a "Port->IP" route on XT-800FXO Gateway, choose a PSTN trunk or PSTN trunk group in the field "Call Source", and choose the SIP account in the field "Call Destination".
- 3) When a call comes to PSTN trunk on XT-800FXO Gateway, the call will be routed to the destination of the SIP server inbound route.

➤ **Register SIP account on IP phone**

With account mode, you can directly take the SIP account to register on your SIP phone or softphone; then make calls from softphone through PSTN trunk on XT-800FXO Gateway and receive incoming calls on your SIP phone or softphone. In this way, you don't have to set up any SIP server.

VoIP Mode

Take a SIP account from your SIP server, and register it on XT-800FXO Gateway as a VoIP trunk. In this way, XT-800FXO and your SIP server are connected.

➤ **Calls from SIP to PSTN**

- 1) Configure a IP-> Port route on XT-800FXO; choose the VoIP trunk in the field "Call Source", and choose PSTN trunk in the field "Call Destination". **Enable Two-stage Dialing** on the route.
- 2) Make a call from your SIP server, dial the SIP account number which is registered on XT-800FXO Gateway. You will hear a dial tone, then dial the external number out through PSTN trunk.

➤ **Calls from PSTN to SIP**

- 1) Configure a Port->IP route on XT-800FXO, choose PSTN trunk in the field "Call Source", and choose the SIP trunk in the field "Call Destination".
- 2) When an incoming call reaches PSTN trunk on XT-800FXO, you will hear a dial tone, then dial an extension number of the SIP server.

SPS Mode (Recommended)

Create a Service Provider SIP trunk on XT-800FXO to connect to your SIP server. Add another Service Provider SIP trunk on your SIP server, connecting to XT-800FXO.

➤ **Calls from SIP to PSTN**

- 1) Create one outbound route on your SIP server, and select the SIP trunk you have created just now.
- 2) Configure a IP->Port route on XT-800FXO, choose the SPS trunk in the field "Call Source", and choose PSTN trunk in the field "Call Destination".
- 3) Make a call from your SIP Server and the call should match the outbound route dial rules.

➤ **Calls from PSTN to SIP**

- 1) Configure a Port->IP route on XT-800FXO Gateway, choose PSTN trunk in the field “Call Source”, and choose the SPS trunk in the field “Call Destination”.
- 2) Create one inbound route on your SIP server and select the SIP trunk created just now.
- 3) When an incoming call reaches PSTN trunk on XT-800FXO Gateway, You will hear a dial tone, then dial an extension number of the SIP Server, it will be routed to the destination of the SIP server inbound route.

Note: if you want the call to go directly to the destination number of your SIP server, you don't have to create an inbound route on SIP server, instead set a **Hotline** number on XT-800FXO Gateway route.

Figure 2-2 Connect IP PBX and XT-800FXO Gateway

For incoming calls from the PSTN to XT-800FXO Gateway, XT-800FXO Gateway will forward the call to a configured SIP extension or to an inbound destination of IP PBX like IVR.

Connect XT-800FXO Gateway and FXS Gateway

XT-800FXO Gateway can be connected to a FXS Gateway using SPS/SPX Mode. Imagine this, the FXO gateway is set up in Site A, and the FXS gateway in Site B. People in Site B can make and receive calls using the local PSTN lines (which is connected to Site A's provider). With this solution, you can call a local number using a local PSTN line wherever you are.

Figure 2-3 Connect XonTel XT-800FXO Gateway and XonTel S3200 FXS Gateway

FXO Port Settings

This chapter explains how to configure FXO port on XT-800FXO Gateway, go to **Gateway**→ **Port List**→ **Port List** page to configure the FXO ports.

- [FXO Port Settings](#)
- [Port Group](#)

FXO Port Settings

Click "Edit" button  to configure the FXO port.

1) General Settings

The screenshot shows a web-based configuration interface for an FXO port. The window title is 'Edit FXO Port - 1'. There are three tabs: 'General', 'Call Duration Setting', and 'Others'. The 'General' tab is active. Inside the 'General' tab, there is a 'General' section with the following settings:

- Name: FXO1
- RxGain: 40%
- TxGain: 40%
- AC Termination Impedance: 0

Figure 3-1 FXO Port General Settings

Table 3-1 Description of FXO Port General Settings

Items	Description
Name	The trunk Name.
RX Gain	The receive volume. The default setting is 40%.
TX Gain	The transmit volume. The default setting is 40%.
AC Termination Impedance	Select the impedance of the analog line connected to the FXO port. Here is the impedance value for the settings: 0 - 600 Ohm (North American) 1 - 900 Ohm 2 - 270 Ohm + (750 Ohm 150nF) and 275 Ohm + (780 Ohm 150nF) 3 - 220 Ohm + (820 Ohm 120nF) and 220 Ohm + (820 Ohm 115nF) 4 - 370 Ohm + (620 Ohm 310nF) 5 - 320 Ohm + (1050 Ohm 230nF)

6 - 370 Ohm + (820 Ohm || 110nF)
 7 - 275 Ohm + (78 Ohm || 150 nF)
 8 - 120 Ohm + (820 Ohm || 110 nF)
 9 - 350 Ohm + (1000 Ohm || 210nF)
 10 - 0 Ohm + (900 Ohm || 30nF)
 11 - 600 Ohm + 2.16 uF
 12 - 900 Ohm + 1 uF
 13 - 900 Ohm + 2.16 uF
 14 - 600 Ohm + 1 uF
 15 - Global complex impedance

2) Call Duration Settings

The screenshot shows the 'Edit FXO Port - 1' window with the 'Call Duration Setting' tab selected. The settings are as follows:

- Single Call Max Duration: 0 min
- Round up duration: 60 s
- Max. Call Duration: 0 s
- Enable Clear Stat.: No
- Balance Alarm Settings:
 - Alarm threshold: (empty) s
 - Port: Port1 - FXO1
 - Number: (empty)
 - Prompt: alert.wav (with a link to Custom Prompts)
 - E-mail Notification: No

Figure 3-2 FXO Port Call Duration Setting

Table 3-2 Description of FXO Port Call Duration Settings

Items	Description
Single CallMax Duration(min)	Configure the duration of each call, it's 0 by default, which means no limit.
Round up Duration	Once the value of Billing Unit is changed, the "Round Up Duration" will be cleared, "Call Duration" will also change accordingly.
Max. Call Duration(min)	Defines the maximum number of billing unit called within a month through the trunk. To disable this limitation set the value at 0.
Enable Clear Stat.	The date to clean the duration status each month.
Balance Alarm Settings	When Max. Call Duration(min) is configured a 0 (no

	limit), this feature is disabled.
Alarm threshold(min)	Configure the time duration when XT-800FXO Gateway will send the alarm message. The value must be less than "Max Call Duration".
Port	Choose the port to dial the alarm call.
Number	The number to receive the alarm call.
Prompt	The prompt played during the alarm call, you can customize the prompts as your wish.
E-mail	The email address to receive the alarm email. Note: please make sure SMTP test is successful in "Email settings" page before configuring this.

3) Other Settings

The screenshot displays the 'Others' configuration tab for an FXO Port. It is divided into several sections: 'Hangup Detection' with settings for Hangup Type, Busy Detection, Busy Count, Busy Interval, Busy Pattern, Frequency Detection, Busy Frequency, Hangup Polarity Detection, and Silence Timeout; 'Answer Detection Type' with Answer Detection Type; 'Caller ID Setting' with Caller ID Detection, Caller ID Start, and Caller ID Signaling; and 'Other Settings' with Ring Detect Timeout.

Figure 3-3 FXO Port Other Settings

Table 3-3 Description of FXO Port Other Settings

Hangup Detection	
Hangup Type	Select which kind of hangup type will be used to detect the call and hang up.
Busy Detection	Enable or disable Busy Detection. It is used for detecting far

	end hangup or busy signal.
Busy Count	If Busy Detection is enabled, it is also possible to specify how many busy tones to wait for before hanging up. The default is 4, but better results can be achieved if this setting is set as 6 or 8. Higher value requires more time for detection, but lower the probability that a false detection may occur.
Busy Interval	Set the busy detection interval.
Busy Pattern	If Busy Detection is enabled, you need to specify the cadence of the busy signal. If a busy pattern is not specified, the system will accept any repeating sound-silence pattern as a busy signal. If a busy pattern is specified, then the system will check the length of the sound and the silence patterns, which will further reduce the chance of a false positive.
Frequency Detection	Enable or disable Frequency Detection, it is used for frequency detection.
Busy Frequency	If Frequency Detection is enabled, you must specify the local frequency.
Hangup Polarity Detection	Enable or disable Polarity Detection. The call will be considered as "hang up" on a polarity reversal.
Silence Timeout	Define the ring out value for this port.
Answer Detection Type	
Answer Detection Type	<p>Answer Detection settings are configured for accurate billing. Select which type to detect the call as answered.</p> <p>1) Default.XT-800FXO Gateway will start to charge once you grab the PSTN trunk to call out, whether the call is answered or not.</p> <p>2) Polarity Detection: If the PSTN line supports polarity, you can choose "Polarity detection". When the callee answers the call, the provider will send a polarity signal, and then XT-800FXO Gateway starts to bill.</p> <p>3) Ring back Tone: If you choose this option, XT-800FXO Gateway will charge the call according to PSTN ring back tone detection. When the "ring duration" or the "ring interval duration" detected on XT-800FXO Gateway is larger than the standard or custom parameters, the call is detected as ANSWERED.</p> <p>*Standard parameters: when you configure the "Tone Zone Settings" you get the country's standard tone parameters.</p>
Custom Ring Tone	Enable or disable Custom Ring Tone. If the custom ring tone is enabled, you need to configure the following settings according to the ring back signal.
Max Ring Duration	Max duration of the ring tone.

Max Ring Interval Duration	Max pause between the two ring tones.
Min Ring Detection	Enable Min Ring Detection, which is useful for complex situations, like when jitter or noise occurs on the PSTN line. Generally it is disabled.
Min Ring Duration	Min duration of the received tone.
Min Ring Interval Duration	Min pause between the two received tones.
Caller ID Setting	
Caller ID Detection	Enable or disable caller ID detection.
Caller ID Start	This option allows one to define the start of a caller ID signal. Ring: start to detect when a ring is received Polarity: start to detect when a polarity reversal is started Before Ring: start to detect before a ring tone
Caller ID Signaling	This option defines the type of caller ID signaling to use. Bell-USA: US standard V23-UK: UK standard V23-Japan: Japanese standard V23-Japan Pure: Japanese standard DTMF: DTMF signal Please check with your PSTN service provider to configure Caller ID Settings. If you don't know how to configure, please contact XonTel support.
Other Settings	
Ring Detect Timeout	There should be a timeout to determine if there is a hang up before the line is answered. Range from 3000 to 8000. Default is 8000 ms.

Port Group

Port group is a feature that allows you to define specific PSTN trunks to a group. A trunk group can be used in a route. When a call is coming or going through the route, an available trunk would be selected in the trunk group. There are two ring strategies supported for Port Group:

- Round-Robin: select the next available port in line.
- Least Used: select the port that is least used.

Edit Port Group - 1

Group ID: 1

Group Name: g

Strategy: Round-robin

Figure 3-4 Port Group

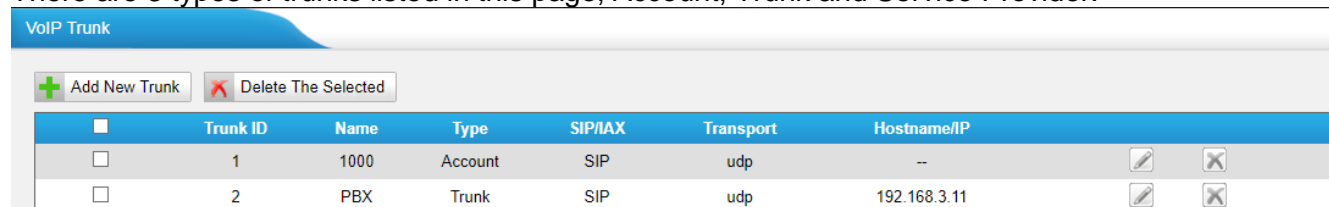

VoIP Settings

To integrate with other IP PBX, we need to configure the VoIP settings in XT-800FXO Gateway to set up VoIP trunk (SIP and IAX). In this chapter, we introduce the following settings:

- VoIP Trunk
- Trunk Group
- SIP Settings
- IAX Settings

VoIP Trunk

There are 3 types of trunks listed in this page, Account, Trunk and Service Provider.

	Trunk ID	Name	Type	SIP/IAX	Transport	Hostname/IP
<input type="checkbox"/>	1	1000	Account	SIP	udp	--
<input type="checkbox"/>	2	PBX	Trunk	SIP	udp	192.168.3.11

Figure 4-1 VoIP Trunk

1) Account

It's an SIP or IAX account created in XT-800FXO Gateway so that the other devices can register SIP or IAX trunk at their side using these information.

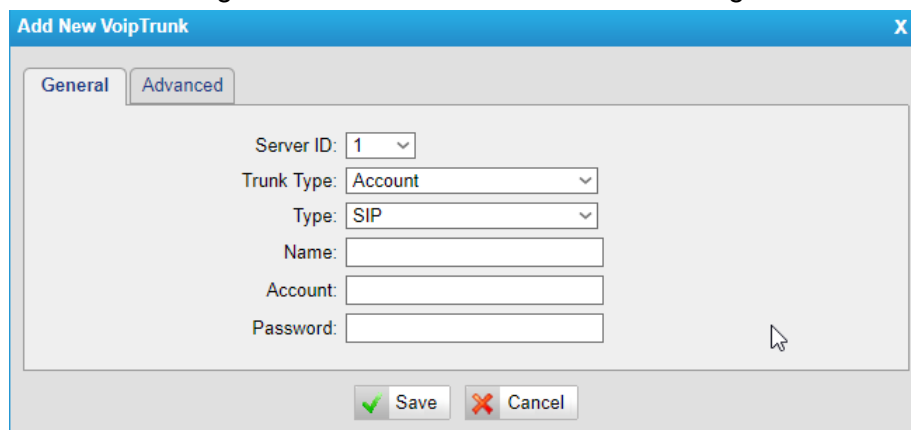

Figure 4-2 Account

Table 4-1 Description of Account Settings

Items	Description
Trunk Type	Choose the type of trunk, "Account".
Type	Choose the type of the VOIP protocol, "SIP".
Name	Define the name.
Account	Define the Account number.
Password	Set a password for this account.

2) Trunk

It's a SIP or IAX trunk configured in XT-800FXO Gateway to register to the VOIP provider, please make sure this trunk works properly in advance with provider before configuring XT-800FXO Gateway.

Figure 4-3 VoIP Trunk Settings

Table 4-2 Description of VoIP Trunk Settings

Items	Description
Trunk Type	Choose the type of trunk, "Trunk".
Type	Choose the type of the VOIP protocol, "SIP".
Provider Name	A unique label to help you identify this trunk when listed in outbound rules, incoming rules etc. E.g. "Xontel".
Hostname/IP	Service provider's hostname or IP address. Note: 5060 is the standard port number used by SIP protocol. Don't change this part if it is not required.
Domain	VoIP provider's server domain name or IP address.
User Name	User name of SIP or IAX account provided from the SIP or IAX Service Provider.
Authorization Name	Authorization Name of SIP or IAX account provided from the SIP Server provider.
Password	Password of the SIP or IAX account.

3) Service Provider

This is service provider trunk (peer to peer mode) which authorized using IP address only.

Add New VoipTrunk

SIP Settings

It is wise to leave the default setting as provided on this page. However, for a few fields, you need to change them to suit your situation.

1) General

The screenshot shows the 'SIP Settings' window with the 'General' tab selected. The settings are as follows:

- UDP Port: 5060
- Enable Random Port: Yes
- Random Port Update Interval: 24 Hour
- Enable TCP Port: 5060
- Enable TLS Port: 5061
- TLS Verify Server: No
- TLS Ignore Common Name: Yes
- TLS Client Method: sslv2
- RTP Port Start: 10000
- RTP Port End: 12000
- DTMF Mode: rfc2833
- Max Registration/Subscription Time: 3600
- Min Registration/Subscription Time: 60
- Default Incoming/Outgoing Registration Time: 120
- Register Attempts: 0
- Register Timeout: 20
- Calling Channel Codec Priority: Yes
- DNS SRV Look Up: No
- User Agent: (empty)

Figure 4-6 SIP General Settings

Table 4-4 Description of SIP General Settings

Items	Description
UDP Port	Port used for SIP registrations. The default is 5060.
Enable Random Port	Enable or Disable Random SIP port.
Random Port Update Interval	Set the Random Port Update Interval.
TCP Port	Port used for SIP registrations. The default is 5060.
TLS Port	Port used for SIP registrations. The default is 5061.
TLS Verify Server	When using XT-800FXO Gateway as a TLS client, whether or not to verify server's certificate. It is "No" by default.
TLS Verify Client	When using XT-800FXO Gateway as a TLS server, whether or not to verify client's certificate. It is "No" by default.
TLS Ignore Common Name	Set this parameter as "No", then common name must be the same with IP or domain name.
TLS Client Method	When using XT-800FXO Gateway as TLS client, specify the protocol for outbound TLS connections. You can select it as tlsv1, sslv2 or sslv3.
RTP Port Start	Beginning of the RTP port range.
RTP Port End	End of the RTP port range.
DTMF Mode	Set the default mode for sending DTMF. Default setting: rfc2833

Max Registration/Subscription Time	Maximum duration (in seconds) of a SIP registration. The default is 3600 seconds.
Min Registration/Subscription Time	Minimum duration (in seconds) of a SIP registration. The default is 60 seconds.
Default Incoming/Outgoing Registration Time	Default Incoming/Outgoing Registration Time: the default duration (in seconds) of incoming/outgoing registration.
Register Attempts	The number of SIP REGISTER messages to send to a SIP Registrar before giving up. The default is 0 (no limit).
Register Timeout	Number of seconds to wait for a response from a SIP Registrar before classifying the register has timed out. The default is 20 seconds.
Calling Channel Codec Priority	Once enabled, when dialing out via SIP/SPS trunks, the codec of calling channel will be selected preferentially. If not, XT-800FXO Gateway will follow the priority order in your SIP/SPS trunks.
Video Support	Support SIP video or no. The default is yes.
Max Bit Rate	Configure the max bit rate for video stream. The default: 384kb/s.
DNS SRV Look Up	Please enable this option when your SIP trunk contains more than one IP address.
User Agent	To change the user agent parameter of asterisk, you can change it if needed.

2) NAT

SIP Settings

General NAT Codecs QOS Response Code Advanced Settings

Note: Configuration of this section is only required when you use remote extensions.

Enable STUN: ☐

STUN Address:

STUN Port:

External IP Address :

External Host :

External Refresh Interval :

Local Network Identification :

NAT Mode : yes 

Allow RTP Re-invite : yes 

Figure 4-7 NAT Settings

Table 4-5 Description of SIP NAT Settings

Items	Description
Enable STUN	STUN (Simple Traversal of UDP through NATs) is a protocol for assisting devices behind a NAT firewall or router with their packet routing.
STUN Address	The STUN server allows clients to find out their public address, the type of NAT they are behind and the internet side port associated by the NAT with a particular local port. This information is used to set up UDP communication between the client and the VOIP provider and so establish a call.
External IP Address	The IP address that will be associated with outbound SIP messages if the system is in a NAT environment.
External Host	Alternatively you can specify an external host, and the system will perform DNS queries periodically. This setting is only required when your public IP address is not static. It is recommended that a static public IP address is used with this system. Please contact your ISP for more information.
External Refresh Interval	Used to identify the local network using a network number/subnet mask pair when the system is behind a NAT or firewall. Some examples of this are as follows: "192.168.0.0/255.255.0.0": All RFC 1918 addresses are local networks; "10.0.0.0/255.0.0.0": Also RFC1918; "172.16.0.0/12": Another RFC1918 with CIDR notation; "169.254.0.0/255.255.0.0": Zero conf local network. Please refer to RFC1918 for more information.
NAT Mode	Global NAT configuration for the system; the options for this setting are as follows: Yes = Use NAT. Ignore address information in the SIP/SDP headers and reply to the sender's IP address/port. No = Use NAT mode only according to RFC3581. Never = Never attempt NAT mode or RFC3581 support. Route = Use NAT but do not include rport in headers.
Allow RTP Reinvite	By default, the system will route media streams from SIP endpoints through itself. Enabling this option causes the system to attempt to negotiate the endpoints to route packets to each other directly, bypassing the system. It is not always possible for the system to negotiate endpoint-to-endpoint media routing.

3) Codecs

We can choose the allowed codec in XT-800FXO Gateway, a codec is a compression or decompression algorithm that used in the transmission of voice packets over a network or the Internet.

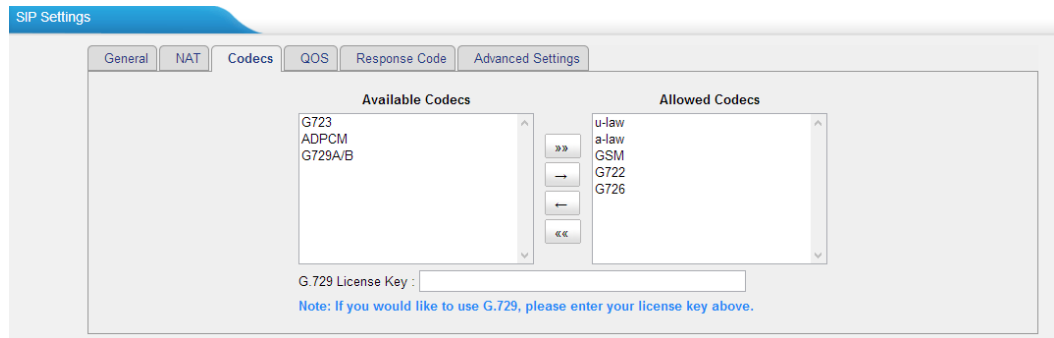

Figure 4-8 Codecs

If you want to use codec G729, we recommend buying a license key and input it here.

4) Qos

QoS (Quality of Service) is a major issue in VoIP implementations. The issue is how to guarantee that packet traffic for a voice or other media connection will not be delayed or dropped due interference from other lower priority traffic. When the network capacity is insufficient, QoS could provide priority to users by setting the value.

Figure 4-9 QOS

Note: It's recommended that you configure the QoS in your router or switch instead of XT-800FXO Gateway side.

5) Response Code

You can change the response code on XT-800FXO Gateway to the one you want before sending it to the VoIP server. It helps the VoIP server understands better the exact call status, like busy, no response and others.

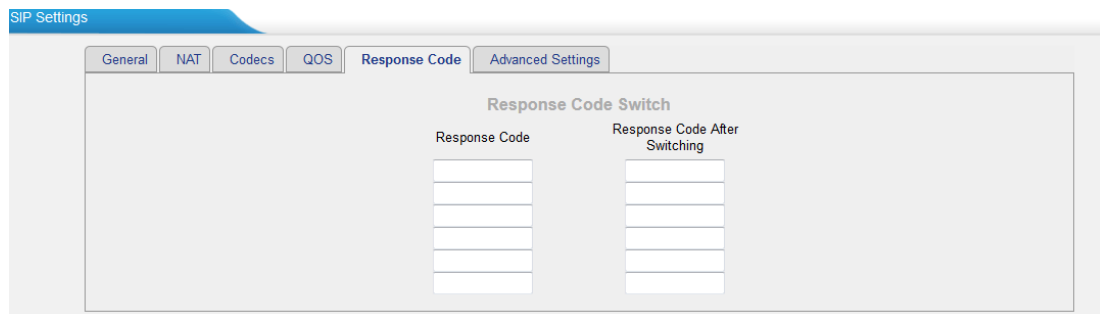

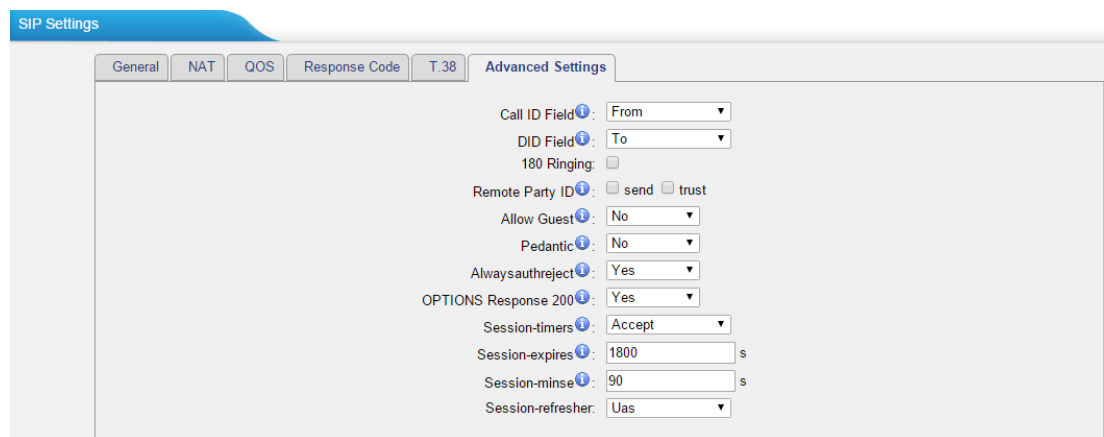

Figure 4-10 Response Code

Note: we don't recommend configuring this if you are not familiar with the code of call status from the VoIP server.

6) Advanced Settings

Items	Description
Call ID Field	Where to get the caller ID in SIP packet.
DID Field	Where to get the DID in SIP packet.
180 Ringing	It is set when the telecom provider needs. Usually it is not needed.
Remote Party ID	Whether to send Remote-Party-ID on SIP header or not. Default: no.
Allow Guest	Whether to allow anonymous registration extension or not. Default: no. It's recommended that it is disabled for security reason.
Pedantic	Enable pedantic parameter. Default: no.
Alwaysauthreject	If enabled, when XT-800FXO Gateway rejects "Register" or "Invite" packets, TA FXO Gateway always respond the packets using "SIP404 NOT FOUND". It's recommended that it is enabled for security reason.
OPTIONS Response 200	If set to yes, the response to an OPTIONS is always 200OK.
Session-timers	Enable session-timer mode, default: yes. If you find the call is cut off every 15 minutes every time, please disable this.
Session-expires	The max refresh interval
Session-minse	The min refresh interval, which mustn't be shorter than 90s.
Session-refresher	Choose the session-refresher, the default is Uas.

IAX Settings

IAX is the Internal Asterisk Exchange protocol, you can connect to XT-800FXO Gateway or register IAX trunk to another IAX server. It's supported by the asterisk-based IP PBX.

The screenshot shows the 'IAX Settings' window. The 'General' tab is selected, displaying the following settings:

- UDP Port: 4569
- Bandwidth: Low
- Minimum Registration/Subscription Time: 60
- Maximum Registration/Subscription Time: 1200

The 'Codecs' tab is also visible, showing the 'Allowed Codecs' section with the following checked options: u-law, a-law, and GSM. Other options like SPEEX, G726, ADPCM, and G729A are unchecked. At the bottom of the window are 'Save' and 'Cancel' buttons.

Figure 4-12 IAX Settings

Table 4-7 Description of IAX Settings

Items	Description
UDP Port	Port used for IAX2 registrations. Default is 4569.
Bandwidth	Low/medium/high with this option you can control which codec to be used.
Minimum Registration Time/Subscription Time	Minimum duration (in seconds) of an IAX2 registration. Default is 60 seconds
Maximum Registration Time/Subscription Time	Maximum duration (in seconds) of an IAX2 registration. Default is 1200 seconds.
Codecs	Enable the codec you want for IAX communication.

Routes Settings

After connecting XT-800FXO Gateway with the VoIP server, you need to configure the routes settings on XT-800FXO Gateway to route the calls through the gateway. In this chapter, we introduce the following sections:

- IP->Port
- Port->IP/Port
- Blacklist
- Callback Settings

IP->Port

Configure IP->Port routes to control calls from your SIP server to XT-800FXO Gateway FXO ports.

Click “Edit” to check the route details, there are two modes for you.

1) Simple Mode

Choose “Yes” for Simple Mode, the simple mode configuration page appears as below.

Figure 5-1 Simple Mode Route

Table 5-1 Description of Simple Mode Route

Items	Description
Route Name	Define the route name.
Call Source	Choose the trunk or trunk group for the incoming calls.
Call Destination	Choose the trunk or trunk group to route the incoming calls to.

Hotline

Dial the number directly, The dial pattern is ignored.

2) Detail Mode

Choose “No” for Simple Mode, you will see the detailed configuration page as the following picture shows. Detailed settings for **Match Incoming Calls** and **Handle Matched Incoming Calls** are provided in Detailed Mode.

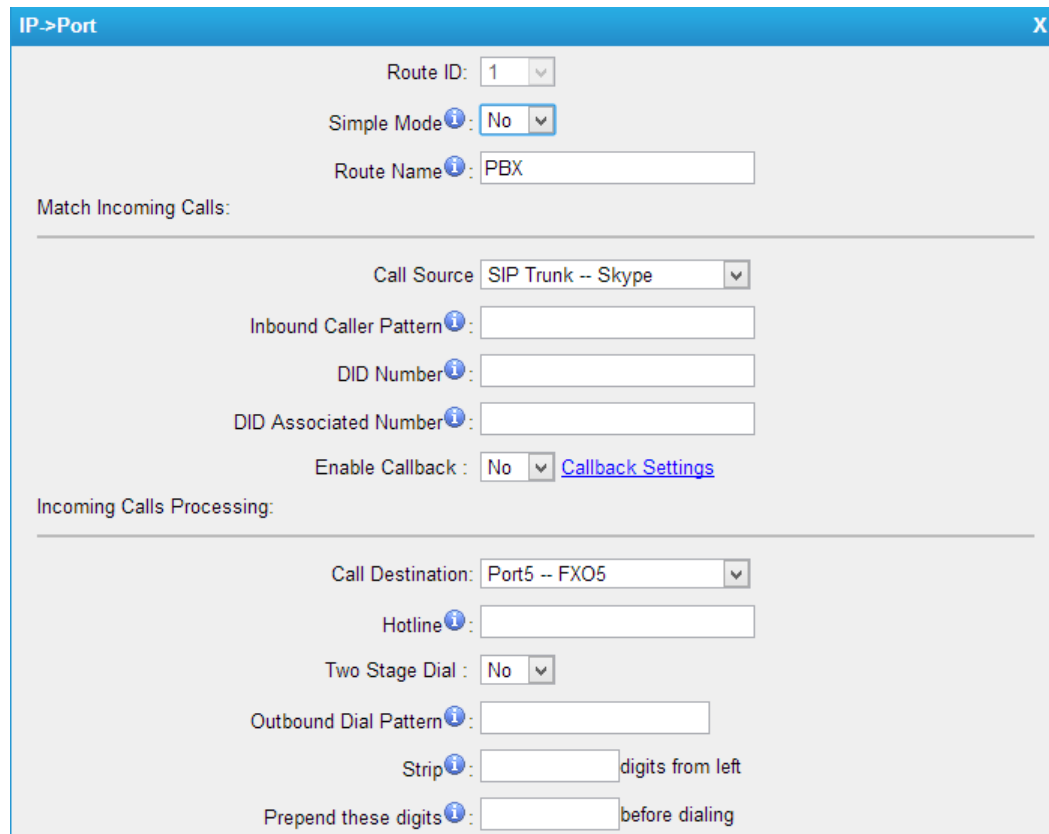

Figure 5-2 Detailed Mode Route

Table 5-2 Description of Match Incoming Calls Settings

Items	Description
Call Source	Choose the trunk or trunk group for the incoming calls.
Inbound Caller Pattern	Match the prefix of caller ID for incoming calls.
DID Number	Define the expected DID Number if this trunk passes DID on incoming calls. Leave this field blank to match calls with any or no DID info. You can also use pattern matching to match a range of numbers.
DID Associated Number	Define the extension for DID number. You can input number and “-” in this field, and the format can be xxx or xxx-xxx. The count of the number must be only one or equal the count of the DID number.

Table 4-13 Description of Handle Matched Incoming Calls Settings

Items	Description
Call Destination	Choose the trunk or trunk group to route the incoming calls to.
Hotline	Direct number to the SIP Server. The parameter is ignored if a SIP Account is selected on this route.
Two-stage Dialing	Enable or Disable Two-stage Dialing.
Outbound Dial Pattern	Outbound calls that match this dial pattern will use this outbound route.
Strip	Allows the user to specify the number of digits that will be stripped from the front of the phone number before the call is placed. For example, if users must press 0 before dialing a phone number, one digit should be stripped from the dial string before the call is placed.
Prepend	These digits will be prepended to the phone number before the call is placed. For example, if a trunk requires 10-digit dialing, but users are more comfortable with 7-digit dialing, this field could be used to prepend a 3-digit area code to all 7-digit phone numbers before calls are placed.

Port->IP/Port

Port->IP/Port routes are used to control incoming calls to PSTN trunks on XT-800FXO Gateway and route the calls to your SIP server or another PSTN trunk on XT-800FXO Gateway.

Click “Edit” to check the route details, there are two modes for you.

1) Simple Mode

Choose “Yes” for Simple Mode, the simple mode configuration page appears as below.

The screenshot shows a configuration window titled "Add Port->IP/Port Route". It contains the following fields and options:

- Route ID: 2 (dropdown)
- Simple Mode: Yes (dropdown)
- Route Name: Elastix (text input)
- Match Incoming Calls: (header)
- Call Source: Port1 -- FXO1 (dropdown)
- Incoming Calls Processing: (header)
- Call Destination: SPS -- sps (dropdown)
- Hotline: (empty text input)
- Buttons: Save (green checkmark), Cancel (red X)

Figure 5-3 Simple Mode Route

Table 5-3 Description of Simple Mode Route

Items	Description
Route Name	Define the route name.
Call Source	Choose the trunk or trunk group for the incoming calls.
Call Destination	Choose the trunk or trunk group to route the incoming calls to.
Hotline	Dial the number directly, The dial pattern is ignored.

2) Detail Mode

Choose "No" for Simple Mode, you will see the detailed configuration page as the following picture shows. Detailed settings for **Match Incoming Calls** and **Handle Matched Incoming Calls** are provided in Detailed Mode.

Port->IP/Port

Route ID: 1

Simple Mode: No

Route Name: test

Match Incoming Calls:

Call Source: Port5 -- FX05

Inbound Caller Pattern:

Enable Callback: No [Callback Settings](#)

Incoming Calls Processing:

Call Destination: SPS -- sps

Hotline: 8000

Outbound Dial Pattern:

Strip: digits from left

Prepend these digits: before dialing

Save Cancel

Figure 5-4 Detailed Mode Route

Table 5-4 Description of Match Incoming Calls Settings

Items	Description
Call Source	Choose the trunk or trunk group for the incoming calls.
Inbound Caller Pattern	Match the prefix of caller ID for incoming calls.
Enable Callback	Whether to enable callback feature.

Table 5-5 Description of Handle Matched Incoming Calls Settings

Items	Description
Call Destination	Choose the trunk or trunk group to route the incoming calls to.
Hotline	Direct number to the SIP Server. The parameter is ignored if a SIP Account is selected on this route.
Outbound Dial Pattern	Outbound calls that match this dial pattern will use this outbound route.
Strip	Allows the user to specify the number of digits that will be stripped from the front of the phone number before the call is placed. For example, if users must press 0 before dialing a phone number, one digit should be stripped from the dial string before the call is placed.
Prepend	These digits will be prepended to the phone number before

the call is placed. For example, if a trunk requires 10-digit dialing, but users are more comfortable with 7-digit dialing, this field could be used to prepend a 3-digit area code to all 7-digit phone numbers before calls are placed.

Blacklist

Blacklist is used to block an incoming or outgoing call. If the number of incoming or outgoing call is listed in the number blacklist, the caller will hear the following prompt: "The number you have dialed is not in service. Please check the number and try again". The system will then disconnect the call.

You can add a number with the type: inbound, outbound or both.

Figure 5-5 Blacklist

Callback Settings

- 1) If you'd like to use callback feature, please make sure it's enabled on the IP->Port or Port->IP/Port route setting panel.
- 2) No callback rules needed to be set if the trunk supports call back with the caller ID directly.
- 3) Add Callback numbers, then callback will work for the added callback numbers. Tick "Allow All Numbers", callback feature will work for all numbers.

Callback Settings

Callback Number Settings

Note:
1. If you'd like to use callback feature, please make sure that it's enabled on the [IP->Port / Port->IP/Port](#) setting panel.
2. No callback rules need to be set if the trunk is able to call back with the caller ID directly.

☒ Allow All Numbers

Add Callback Number

Delete The Selected

Figure 5-6 Callback Settings

Gateway Settings

This chapter explains Gateway settings, which can be applied globally to XT-800FXO Gateway. The gateway settings can be configured under **Gateway**→ **Gateway Settings**.

- **General Preferences**

General Preferences

The screenshot shows the 'General Preferences' configuration interface. It has a blue header bar with the title 'General Preferences'. Below the header, there are two main sections: 'General Settings' and 'Voice Settings'. The 'General Settings' section contains three fields: 'MAX Call Duration' set to 6000 s, 'G723 Encoding Rate' set to 6.3kbps, and 'FXO Mode' set to SAUDIARABIA. The 'Voice Settings' section contains four fields: 'Enable Jitterbuffer' set to No, 'Jitter Buffer MaxSize' set to 40, 'VAD' set to Yes, and 'Echo Tail Length' set to 128ms.

Figure 6-1 General Preferences

General Settings	
MAX Call Duration	The absolute maximum amount of time permitted for a call. A setting of 0 disables the timeout.
G723 Encoding Rate	Set the G723 encoding rate.
FXO Mode	Select country to set the On Hook Speed, Ringer Impedance, Ringer Threshold, Current Limiting, TIP/RING voltage adjustment, Minimum Operational Loop Current, and AC Impedance as predefined for your country's analog line characteristics. The default setting is "SAUDIARABIA".
Voice Settings	
Enable Jitter buffer	Forces the use of a jitter buffer on the received side of a SIP channel. The call quality will be improved if this option is enabled.
Jitter Buffer MaxSize	Max length of the jitter buffer in milliseconds. Default: 40.
VAD	Voice Activity Detection.
Echo Tail Length	In some cases, the echo canceller doesn't train quickly enough and there is echo at the beginning of the call which then quickly fades out.

Audio Settings

This chapter explains prompt settings on XT-800FXO Gateway.

- Custom Prompts

Custom Prompts

We can upload the prompts in this page; you can also download it and save it as a backup.

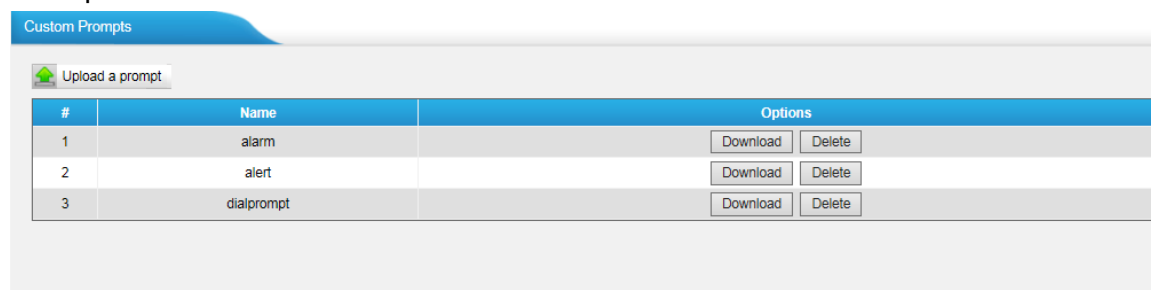

Figure 7-1 Custom Prompts

The administrator can upload prompts by doing the following:

- 1) Click "Upload Prompt".
- 2) Click "Browse" to choose the desired prompt.
- 3) Click "Upload" to upload the selected prompt.

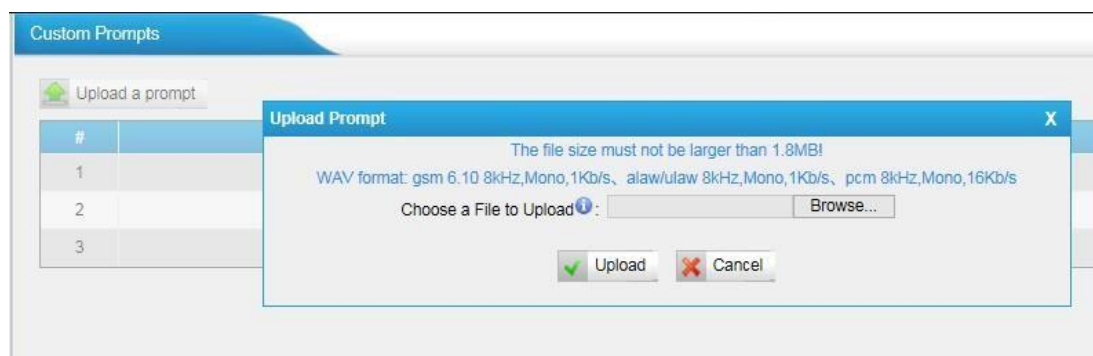

Figure 7-2 Upload A Prompt

Note: The file size must not be larger than 1.8 MB, and the file must be WAV format:

GSM 6.10 8 kHz, Mono, 1 Kb/s;

Alaw/Ulaw 8 kHz, Mono, 1 Kb/s;

PCM 8 kHz, Mono, 16 Kb/s.

Advanced Settings

This chapter explains SIP settings and Distinctive Ringtones.

- [Tone Zone Settings](#)
- [DTMF Settings](#)

Tone Zone Settings

Advanced ring tones for all the FXO ports can be configured on this page. There are pre-programmed tone zone settings for some countries and regions. Users can simply find and select their country to get tone zone settings for the gateway.

The screenshot shows the 'Tone Zone Settings' page. At the top, there's a tab labeled 'Tone Zone Settings'. Below it, the 'Country/Region' dropdown is set to 'United States / North America'. The settings are as follows:

- Ring Cadence: 2000, 4000
- Dial Tone: 350+440
- Ringback Tone: 440+480/2000, 0/4000
- Busy Tone: 480+620/500, 0/500
- Call-Waiting Tone: 440/300, 0/10000
- Congestion Tone: 480+620/250, 0/250
- 2nd Dial Tone: 350+440/100, 0/100, 350+440/100, 0/100, 350+440/100, 0/100, 350+440

Figure 8-1 Tone Zone Settings

Users may also configure the tone zone according to the national standard by selecting "User custom for Tone Zone". Please refer to the document below and configure the tone zone settings on XT-800FXO Gateway:

<http://www.itu.int/ITU-T/inr/forms/files/tones-0203.pdf>

The screenshot shows the 'Tone Zone Settings' page with the 'Country/Region' dropdown set to 'Customize Tones'. The settings are as follows:

- Ring Cadence: (empty field)
- Dial Tone: (empty field)
- Ringback Tone: (empty field)
- Busy Tone: (empty field)
- Call-Waiting Tone: (empty field)
- Congestion Tone: (empty field)
- 2nd Dial Tone: (empty field)

Figure 8-2 Customize Tones

Table 8-1 Description of Tone Zone Settings

Items	Description
Country/Region	Choose the country to get pre-programmed tone zone settings or choose "User custom for Tone Zone" to configure the settings manually.
Ring Cadence	Configuration option for all FXO ports ring cadence for all

	incoming calls.
Dial Tone	Prompt tone of off-hook dial tone.
Ringback Tone	The tone sent to caller when ringing is on.
Busy Tone	Used for busy line prompt.
Call-Waiting Tone	Used for notification in call waiting.
Congestion Tone	Used to indicate that an invalid code has been dialed, or that all circuits (trunks) are busy and/or the call is unroutable.
2nd Dial Tone	Used for the second stage dial tone.

DTMF Settings

DTMF signal sent from XT-800FXO Gateway to the receiver can be set on this page. Digit Length and Dial Pause Between Digit: 100.100 (ms)
Default Digit Volume: -10,-10 (dB)

DTMF Settings

DTMF Settings

Digit Length And Dial Pause Between Digit *i*: 100,100 ms

Use Default Volume: Yes ▼

Digit Volume *i*: -10,-10 dB

Network Preferences

This chapter explains network settings on XT-800FXO Gateway. Click the main menu on the top of the Web GUI to check the network settings.

- LAN Settings
- WAN Settings
- Service
- VLAN Settings
- VPN Settings
- DDNS Settings
- Static Route

LAN Settings

After successfully logging in the XT-800FXO Gateway Web GUI for the first time, users could go **System**→**Network Preferences**→**LAN Settings** to configure the network for XT-800FXO Gateway.

Figure 9-1 LAN Settings

Table 9-1 LAN Settings

Items	Description
Hostname	Set the host name for XT-800FXO Gateway.
Mode	Choose the network mode: <ul style="list-style-type: none"> Static IP Address DHCP
IP Address	Set the IP Address for XT-800FXO Gateway.
Subnet Mask	Set the subnet mask for XT-800FXO Gateway.
Gateway	Set the gateway for XT-800FXO Gateway.
Primary DNS	Set the primary DNS for XT-800FXO Gateway.
Secondary DNS	Set the secondary DNS for XT-800FXO Gateway.
IP Address2	Set the second IP Address for XT-800FXO Gateway.
Subnet Mask2	Set the second subnet mask for XT-800FXO Gateway.

LAN Settings

General Settings

Hostname: XT-800FXO

Mode: DHCP

Figure 9-2 DHCP Mode

Select DHCP mode to get network automatically from the local network.

WAN Settings

Users could go **System**→**Network Preferences**→**WAN Settings** to configure the WAN network settings for XT-800FXO Gateway.

WAN Settings

Use WAN: ☒

Mode: Static IP Address

IP Address: 192.168.1.200

Subnet Mask: 255.255.255.0

Default Gateway: 192.168.1.1

Primary DNS: 8.8.8.8

Secondary DNS: 192.168.1.1

Save Cancel

Figure 9-3 WAN Settings

Table 9-2 WAN Settings

Items	Description
Mode	Choose the network mode: <ul style="list-style-type: none"> Static IP Address DHCP PPPOE
IP Address	Set the IP Address for XT-800FXO Gateway.
Subnet Mask	Set the subnet mask for XT-800FXO Gateway.
Gateway	Set the gateway for XT-800FXO Gateway.
Primary DNS	Set the primary DNS for XT-800FXO Gateway.
Secondary DNS	Set the secondary DNS for XT-800FXO Gateway.

The screenshot shows the 'WAN Settings' page. Under the 'WAN Settings' tab, there is a section with 'Use WAN: ☒'. Below it, the 'Mode' is set to 'DHCP' in a dropdown menu.

Figure 9-4 DHCP Mode

Select DHCP mode to get network automatically from the local network.

The screenshot shows the 'WAN Settings' page. Under the 'WAN Settings' tab, there is a section with 'Use WAN: ☒'. Below it, the 'Mode' is set to 'PPPoE' in a dropdown menu. There are also input fields for 'User Name' and 'Password'.

Figure 9-5 PPPoE

Fill in user name and password to access the Internet via PPPoE.

Service

User can manage all the access methods on XT-800FXO Gateway on "**Service**" page.

The screenshot shows the 'Service' page. Under the 'General Service Settings' tab, there are two sections: 'Enable SSH: Yes Port: 8022' and 'Enable FTP: Yes Port: 21'. Below these, under the 'Web Server' tab, there are settings for 'HTTP: Enabled' and 'HTTPS: Disabled'. The 'HTTP Bind Port' is set to 80, and the 'HTTPS Bind Port' is set to 443.

Figure 9-6 Service Settings

Table 9-3 Description of Service Settings

Items	Description
SSH	By using SSH, you can log in to XT-800FXO Gateway and run commands. It's disabled by default. We don't recommend enabling it if not needed. The default port for SSH is 8022.
FTP	FTP access; The default port is 21.
HTTP	HTTP web access; The default port is 80
HTTPS	HTTPS web access, it is disabled by default, and you can enable it to get safer web access.

VLAN Settings

VLAN (Virtual Local Area Network) is a group of hosts with a common set of requirements, which communicate as if they were attached to the same broadcast domain, regardless of their physical location.

A VLAN is a broadcast domain created by switches. This means the VLAN is configured on switches, layer 3 switches. Note that some of the switches don't support VLAN.

Note:

XT-800FXO Gateway acts as a VLAN client, a 3-layer switch is needed.

The screenshot shows a web-based configuration interface for VLAN settings. The main window is titled 'VLAN Settings'. Inside, there's a section 'VLAN Over LAN'. This section contains two identical blocks, labeled 'NO.1' and 'NO.2'. Each block has four input fields: 'VLAN Number', 'VLAN IP Address', 'VLAN Subnet Mask', and 'Default Gateway'. There are also checkboxes next to 'NO.1' and 'NO.2'. At the bottom of the window, there are two buttons: 'Save' (with a green checkmark icon) and 'Cancel' (with a red X icon).

Figure 9-7 VLAN Settings

Please follow the steps below to set up VLAN on XT-800FXO Gateway.

Step1. Create VLANs on your switch.

Step2. Allocate a VLAN ID and IP address for XT-800FXO Gateway.

Step3. Configure VLAN settings page on XT-800FXO Gateway.

VPN Settings

A virtual private network (VPN) is a method of computer networking typically using the public internet that allows users to privately share information between remote locations, or between a remote location and a business' home network. A VPN can provide secure information transport by authenticating users, and encrypting data to prevent unauthorized persons from reading the information transmitted. The VPN can be used to send any kind of network traffic securely. XT-800FXO Gateway supports Open VPN.

Figure 9-8 VPN Settings

- **Enable VPN**
Enable VPN feature.
- **Import VPN Config**
Import configuration file of Open VPN.

Notes:

1. Uncomment “user” and “group” in the “config” file. You can get the config package from the Open VPN provider.
2. XT-800FXO Gateway works as VPN client mode only.

DDNS Settings

DDNS (Dynamic DNS) is a method/protocol/network service that provides the capability for a networked device, such as a router or computer system using the Internet Protocol Suite, to notify a Domain Name System (DNS) name server to change, in real time, the active DNS configuration of its configured hostnames, addresses or other information.

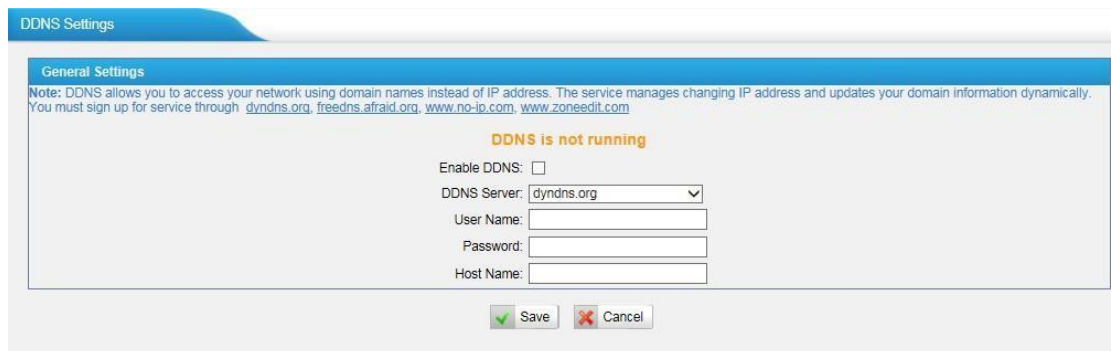

Figure 9-9 DDNS Settings

Table 9-4 Description of DDNS Settings

Items	Description
DDNS Server	Select the DDNS server you sign up for service.
User Name	User name the DDNS server provides you.
Password	User account's password.

Host Name

The host name you have got from the DDNS server

Note: DDNS allows you to access your network using domain names instead of IP address. The service manages changing IP address and updates your domain information dynamically. You must sign up for service through dyndns.org, freedns.afraid.org, www.no-ip.com, www.zoneedit.com.

Static Route

XT-800FXO Gateway will have more than one Internet connection in some situations but it has only one default gateway. You will need to set some Static Route for XT-800FXO Gateway to force it to go out through different gateway when accessing to different internet.

The default gateway priority of XT-800FXO Gateway from high to low is VPN/VLAN → LAN port.

The screenshot shows the 'Static Route Settings' window. At the top is the 'Routing Table' with the following data:

Destination	Subnet Mask	Gateway	Metric
192.168.7.0	0.0.0.0	255.255.255.0	0
0.0.0.0	192.168.7.1	0.0.0.0	0

Below this is the 'Static Route Rules' section. It includes input fields for ID (set to 1), Destination, Subnet Mask, Gateway, and Metric, along with a 'Modify' button. Below the inputs is a table with 8 rows, each representing a rule. All fields in this table are currently empty or set to default values (indicated by '--').

ID	Destination	Subnet Mask	Gateway	Metric	
1	--	--	--	--	X
2	--	--	--	--	X
3	--	--	--	--	X
4	--	--	--	--	X
5	--	--	--	--	X
6	--	--	--	--	X
7	--	--	--	--	X
8	--	--	--	--	X

Figure 9-10 Static Route

1) Route Table

The current route rules of XT-800FXO Gateway.

2) Static Route Rules

You can add new static route rules here.

Table 9-4 Description of Static Route Settings

Items	Description
Destination	The destination network to be accessed to by XT-800FXO Gateway.
Subnet Mask	Specify the destination network portion.
Gateway	Define which gateway XT-800FXO Gateway will go through when accessing the destination network.
Metric	The cost of a route is calculated by using what are called routing

metric. Routing metrics are assigned to routes by routing protocols to provide measurable statistic which can be used to judge how useful (how low cost) a route is.

Security Center

This chapter describes how to secure your XT-800FXO Gateway. It is strongly recommended that users configure firewall and other security options on XT-800FXO Gateway to prevent the attack fraud and the system failure or calls loss.

- Security Center
- Alert Settings
- AMI Settings
- Certificates
- Firewall Rules
- IP Blacklist

Security Center

All the security settings including Firewall, Service, Port Settings in XT-800FXO Gateway are displayed in Security Center. Users could rapidly check and configure the relevant security settings here.

1) Firewall

In the “Firewall” tab, users could check firewall configuration and alert settings. By clicking the relevant button, you can enter the configuration page directly.

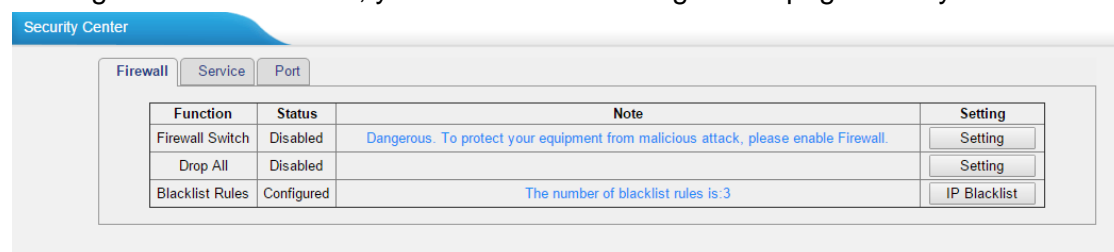

Figure 10-1 Security Center—Firewall

2) Service

In “Service” tab, you can check AMI/SSH status. For AMI/SSH, you can enter the according page by clicking the button in “Setting” column.

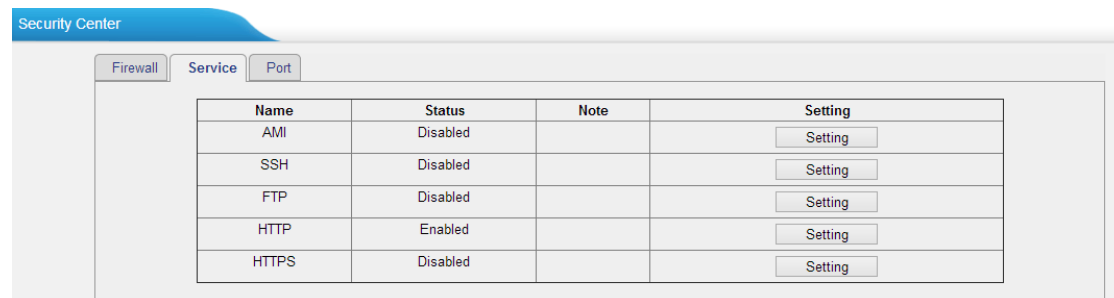

Figure 10-2 Security Center—Service

3) Port

In “Port” tab, you can check SIP port and HTTP port. You can also enter the relevant page by clicking the button in “Setting” column.

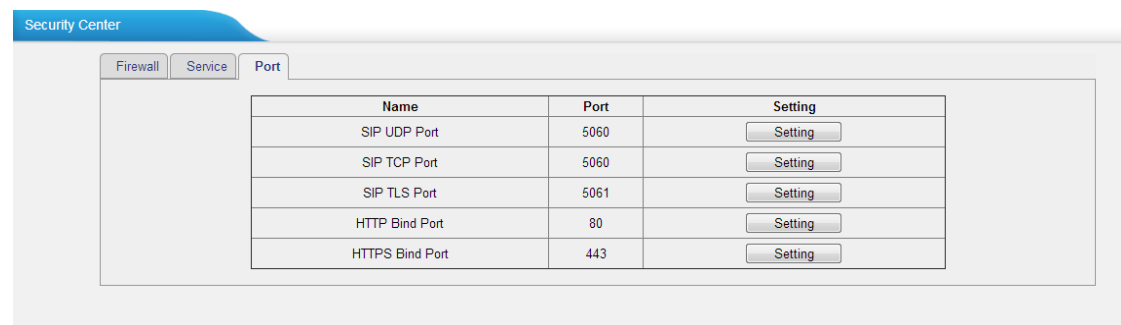

Figure 10-3 Security Center—Port

Alert Settings

If the device is under attack, the system will alert users via call or E-mail. The attack modes include IP attack and Web Login.

- IPATTACK

When the system is attacked by IP address, the firewall will add the IP to auto IP Blacklist and notify the user if it matches the protection rule.

- WEBLOGIN

Web Login Alert Notification: entering the wrong password consecutively for five times when logging in XT-800FXO Gateway Web interface will be deemed as an attack, the system will limit the IP login within 10 minutes and notify the user.

Figure 10-4 Alert Settings

Table 10-1 Description of Alert Settings

Phone Notification Settings	
PHONE Notification	Whether to enable phone notification or not.
Port	Choose the FXO port that you want to use when dial the desired number
Number	The numbers could be set for alert notification; users can setup multiple extension and outbound phone numbers. Please separate them by “;”. Example: “500;9911”, if the extension has configured Follow Me Settings, the call would go to the forwarded number directly.
Attempts	The attempts to dial a phone number when there is no answer.
Interval	The interval between each attempt to dial the phone number. Must be longer than 3 seconds, the default value is 60 seconds.
Prompt	Users will hear the prompt while receiving the phone notification.
Email Notification Settings	
E-mail Notification	Whether to enable E-mail Notification or not.

Recipient's Name	The recipients for the alert notification, and multiple email addresses are allowed, please separate them by “,”. E.g. b.mansour@xontel.com;Ali@xontel.com
Subject	The subject of the alert email.
Email Content	Text content supports predefined variables. Variable names and corresponding instructions are as follows: gateway hostname:\$(HOSTNAME) attack source ip address:\$(SOURCEIP) attack dest mac:\$(DESTMAC) attack source port:\$(DESTPORT) attack source protocol:\$(PROTOCOL) attack occurred:\$(DATETIME)

Important Note:

To use alert settings with email notification please configure **Email Settings** in XT-800FXO Gateway

AMI Settings

The Asterisk Manager Interface (AMI) is a system monitoring and management interface provided by Asterisk. It allows live monitoring of events that occur in the system, as well enabling you to request that Asterisk perform some action. The actions that are available are wide-ranging and include things such as returning status information and originating new calls.

There are two main types of messages on the Asterisk Manager Interface: manager events and manager actions.

The 3rd party software can work with XT-800FXO Gateway using AMI interface. It is disabled by default. If necessary, you can enable it.

Figure 10-5 AMI Settings

User Name, Password & Port

After enabling AMI, you can use this username and password to log in XT-800FXO Gateway. The default port is 5038.

- Permitted "IP address/Subnet mask"

You can set which IP is allowed to log in XT-800FXO Gateway AMI interface.

Certificates

XT-800FXO Gateway supports TLS transport, you can configure FXO port with TLS transport. To use TLS, you should upload certificates first.

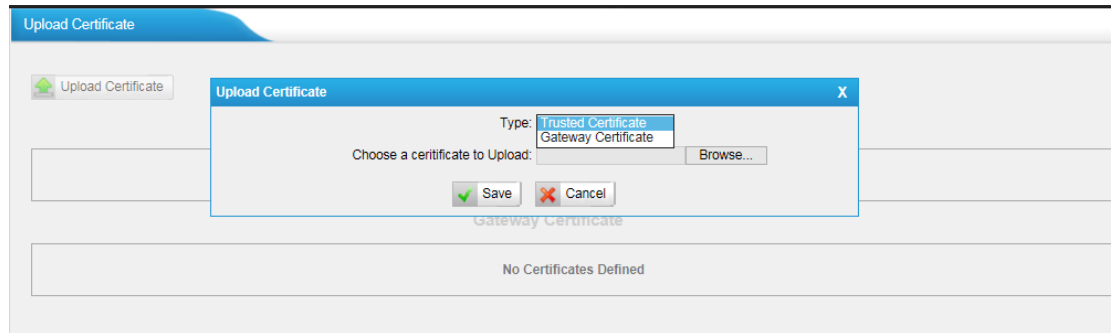

Figure 10-6 Upload Certificate

- Trusted Certificate

This certificate is a CA certificate. When selecting "TLS Verify Client" as "Yes", you should upload a CA. The relevant VoIP provider should also have this certificate.

- Gateway Certificate

This certificate is server certificate. No matter selecting "TLS Verify Client" as "Yes" or "NO", you should upload this certificate to XT-800FXO Gateway. If the VoIP provider enables "TLS Verify server", you should also upload the relevant CA certificate on the VoIP provider.

Firewall Rules

Firewalls are used to prevent unauthorized Internet users from accessing private networks connected to the Internet, especially intranets. All messages entering or leaving the intranet pass through the firewall, which examines each message and blocks those that do not meet the specified security criteria.

Figure 10-7 Firewall Settings

1) General Settings

Table 10-2 Description of Firewall General Settings

Items	Description
Enable Firewall	Enable the firewall to protect the device.
Disable Ping	Enable this item to drop net ping from remote hosts.
Drop All	When you enable “Drop All” feature, the system will drop all packets or connection from other hosts if there are no other rules defined. To avoid locking the devices, at least one “TCP” accept common rule must be created for port used for SSH access, port used for HTTP access and port sued for CGI access.

2) Common Rules

There is no default rule; you can create one as required.

The 'Add Firewall Rule' dialog box includes the following fields:

- Name:** A text input field.
- Description:** A large text area for a detailed description.
- Protocol:** A dropdown menu currently set to 'UDP'.
- Port:** Two text input fields for specifying a port range.
- IP:** Two text input fields separated by a slash, for specifying an IP address and its mask.
- MAC Address:** A single text input field.
- Action:** A dropdown menu currently set to 'Drop'.

Figure 10-8 Common Rules

Table 10-3 Description of Common Rules

Items	Description
Name	A name for this rule, e.g. "HTTP".
Description	Simple description for this rule. E.g. accept the specific host to access the Web interface for configuration.
Protocol	The protocols for this rule.
Port	Initial port should be on the left and end port should be on the right. The end port must be equal to or greater than start port.
IP	The IP address for this rule. The format of IP address is: IP/mask E.g. 192.168.5.100/255.255.255.255 for IP 192.168.5.100 E.g. 192.168.5.0/255.255.255.0 for IP from 192.168.5.0 to 192.168.5.255.
MAC Address	The format of MAC Address is XX:XX:XX:XX:XX:XX, X means 0~9 or A~F in hex, the A~F are not case sensitive.
Action	Accept: Accept the access from remote hosts. Drop: Drop the access from remote hosts. Ignore: Ignore the access.

Note: the MAC address will be changed when it's a remote device, so it will not be working to filter using MAC for remote devices.

3) Auto Defense

The 'Add Auto Defense Rule' dialog box includes the following fields and buttons:

- Port:** A text input field.
- Protocol:** A dropdown menu currently set to 'UDP'.
- Rate:** A text input field followed by a dropdown menu currently set to 'Second'.
- Buttons:** 'Save' (with a green checkmark icon) and 'Cancel' (with a red X icon).

Figure 10-9 Auto Defense

Table 10-4 Description of Auto Defense

Items	Description
Port	The port you want to auto defense, for example, 8022.
Protocol	Select the protocol. You can select UDP or TCP.
Rate	The maximum packets or connections can be handled per unit time. For example, if you configure it as below: Port: 8022 Protocol: TCP Rate: 10/min Then, it means maximum 10 TCP connections can be handled in 1 minute. The 11 th connection will be dropped.

IP Blacklist

You can set some packets accept speed rules here. When an IP address, which hasn't been accepted in common rules, sends packets faster than the allowed speed, it will be set as a black IP address and be blocked automatically.

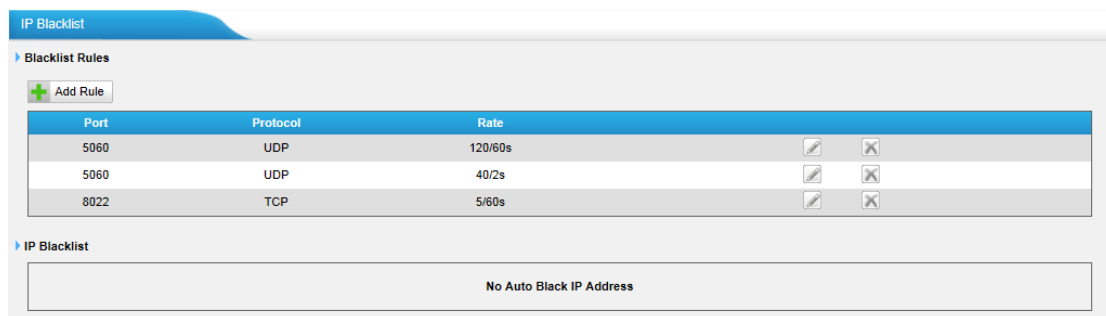

Figure 10-10 IP Blacklist Settings Page

1) Blacklist rules

We can add the rules for IP blacklist rate as demanded.

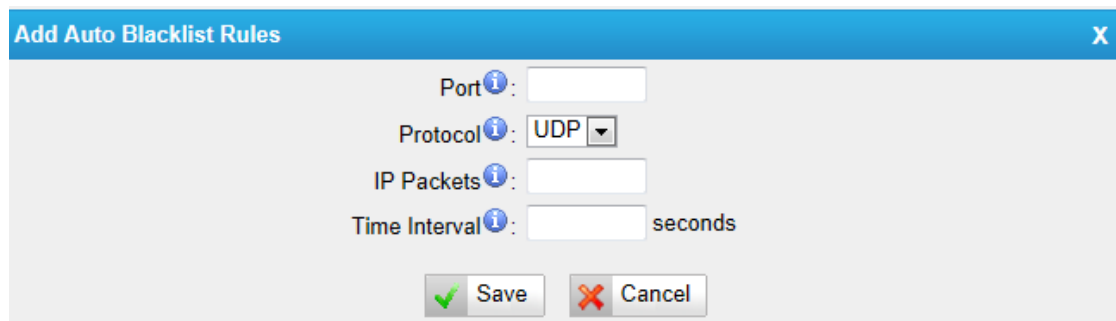

Figure 10-11 Add Blacklist Rule

Table 10-5 Description of Auto Blacklist Rules

Items	Description
Port	Auto defense port
Protocol	Auto defense protocol. TCP or UDP.
IP Packets	Allowed IP packets number in the specific time interval.
Time interval	The time interval to receive IP packets. For example, IP packets 90, time interval 60 means 90 IP packets are allowed in 60 seconds.

2) IP blacklist

The blocked IP address will display here, you can edit or delete it as you wish.

System Preferences

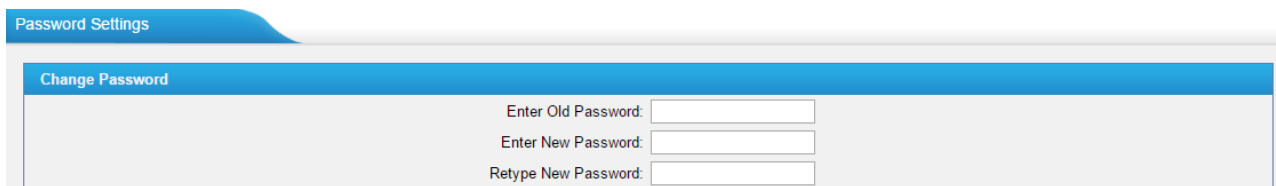

This chapter describes system maintenance settings including the followings:

- Password Settings
- Date and Time
- Email Settings
- Auto Provision Settings
- Firmware Update
- Backup and Restore
- Reset and Reboot

Password Settings

It is highly recommended to change the system's password after first login. Go to **System→System Preferences→Password Settings** to change the password.

1. Enter the old password first.
2. Enter a new password and retype the new password to confirm. The password complexity will be detected, which will help users to set a strong password and make XT-800FXO Gateway safer. A strong password is comprised of letters, numbers and characters.
3. Save the changes, the user will be automatically logged out.
4. Log in XT-800FXO Gateway using the new password.

The screenshot shows a web interface for 'Password Settings'. It features a blue header bar with the title 'Change Password'. Below the header, there are three input fields with labels: 'Enter Old Password:', 'Enter New Password:', and 'Retype New Password:'. The interface is clean and modern, with a light gray background and blue accents.

Figure 11-1 Password Settings

Date and Time

Please adjust the time of XT-800FXO Gateway (including the time zone) consistent with your local time. Go to **System→System Preferences→Date and Time** to configure the system date and time.

The screenshot shows the 'Date & Time' configuration page. At the top, the 'Server Time' is displayed as 'Tue May 05 22:28:17 2015'. Below this, the 'Time Zone' is set to '-8 United States - Pacific Time'. The 'Daylight Saving Time' is set to 'Disabled'. There are two radio button options: 'Automatically Synchronize With an Internet Time Server' (which is selected) and 'Set Date & Time Manually'. Under the selected option, the 'NTP Server' is set to 'pool.ntp.org'. Under the 'Set Date & Time Manually' option, there are fields for 'Date' and 'Time' (with AM/PM dropdown).

Figure 11-2 Date and Time

- **Time Zone**
Select your current and correct time zone on XT-800FXO Gateway.
- **Daylight Saving Time**
The option is disabled by default. Enable it when necessary.
- ▢ **Automatically Synchronize with an Internet Time Server**
XT-800FXO Gateway will adjust its internal clock to a central network server. Please note the XT-800FXO Gateway should be able to access to the Internet if you choose this method.
- ▢ **Set Date & Time Manually**
Enter the time using the numbers on your keyboard.

Note: you have to reboot the system to make the changes take effect.

Email Settings

Please configure Email settings if you want to use Email Notification in “**Alert Settings**” in XonTel XT-800FXO Gateway

The screenshot shows the 'Email Settings' page. The 'SMTP Settings for Email' section is highlighted. A note states: 'Note: If you would like to send system alert or balance alarm with email, please configure this section.' Below this, the 'SMTP Settings' section contains four input fields: 'E-mail Address', 'Password', 'SMTP Server', and 'Port'. At the bottom, there is a checkbox labeled 'Use SSL/TLS to send secure message to server' and a 'Test SMTP Settings' button.

Figure 11-3 Email Settings

E-mail Address

The E-mail Address that XT-800FXO Gateway will use to send system alert or balance alarm.

Password

The password for the email address used above.

SMTP Server

The hostname of an SMTP server that XT-800FXO Gateway will connect in order to send system alarm or balance alarm via email, i.e. mail.yourcompany.com.

Port

SMTP Port: the default value is 25.

Use SSL/TLS to send secure message to server

If the server of sending email needs to authenticate the sender, you need to select the check box.

Note:

This option must be selected for Gmail or exchange server. After filling out the above information, you can click on the 'Test Account Settings' button to check whether the setup is OK.

- 1) If the test is successful, you can use the email safely.
- 2) If test failed, please check the above information is correct or network is proper.

Auto Provision Settings

Three methods are supported for Auto Provision: PNP, DHCP and you can manually configure a server URL to get the configuration file from the server. Go to **System→System Preferences→Auto Provision Settings** to configure.

Auto Provision Settings

Auto Provision Mode

Provision Method:

PNP: Yes ▾

DHCP: No ▾

Server URL: No ▾

Figure 11-4 Auto Provision Methods

PNP and **DHCP** modes work along with PBX. Firstly, users need to configure XT- 800FXO on PBX. Then XT-800FXO will find and get the configuration file from PBX during boots up.

In **PNP** mode, you just need to place the XT-800FXO in the same IP range network with PBX, then you can find the XT-800FXO and provision it on PBX.

If you use **DHCP** mode to do auto provision, you should enable DHCP Server on PBX to make it as a DHCP server.

Then select DHCP mode on LAN settings page to make XT-800FXO Gateway as a DHCP client.

LAN Settings

General Settings

Hostname:

Mode:

Figure 11-5 Set XT-800FXO Gateway as a DHCP Client

Another way to do auto provision is to download configuration file from the configured server URL. Fill in the URL, user name, password, and set the time, XT-800FXO will get the configuration file from the server automatically and regularly.

Server URL:

Server Settings:

Server URL:

User Name:

Password:

☐ Interval of time Minute

☒ Specified time :

Other:

AES Key:

Always Apply:

Figure 11-6 Server Address

Note: if there is no user name and password for the server, leave these fields blank.

- **AES Key**
If the configuration file is encrypted by AES key, you need to fill the key in this field.
- **Always Apply**
With No, it will compare the current configuration file with the last updated one, if the contents are the same no update will be applied. With Yes, it will always apply the updated configuration file.

Firmware Update

XT-800FXO Gateway can be upgraded to a new firmware version via network or locally. Users could upgrade firmware via HTTP or TFTP. Please go to **System**→**System Preferences**→**Firmware Update** to do upgrade.

Notes:

1. If “Reset configuration to Factory Defaults” is enabled, the system will be restored to factory default settings.
2. When updating the firmware, please don't turn off the power. Or the system will be damaged.
3. If you are trying to upgrade through HTTP, please make sure that your XT-800FXO Gateway is able to visit external network, or it cannot access XonTel website to get the firmware file, causing the upgrade fail.

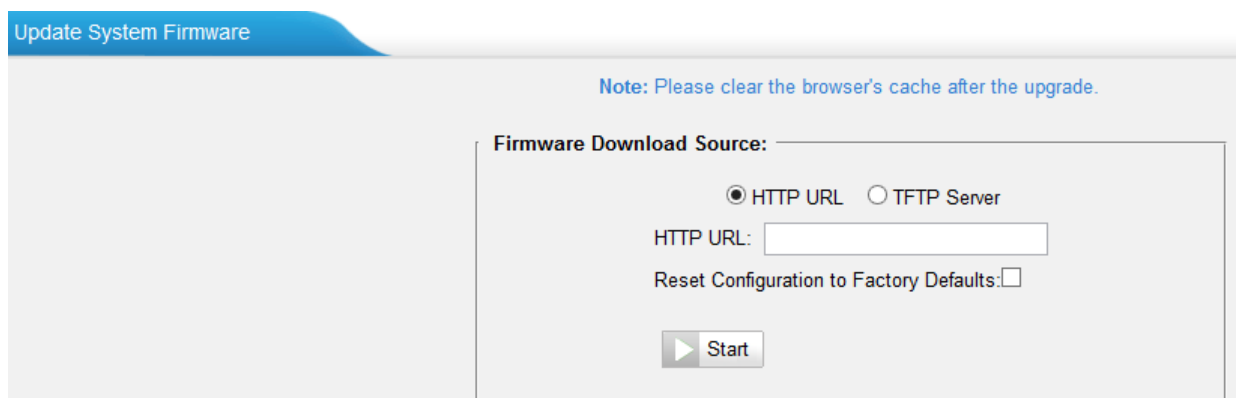

Upgrade through HTTP

On the Firmware Upgrade page, choose **HTTP URL**.

Step1. Enter the download link of the firmware file.

Note: the HTTP URL should be a **BIN** file download link.

Step2. Click “Start” to upgrade.

The screenshot shows the 'Update System Firmware' page. At the top, there is a blue header with the text 'Update System Firmware'. Below the header, a note in blue text says 'Note: Please clear the browser's cache after the upgrade.' The main content area is titled 'Firmware Download Source:'. It contains two radio buttons: 'HTTP URL' (which is selected) and 'TFTP Server'. Below the radio buttons, there is a text input field for the 'HTTP URL:'. Underneath the input field, there is a checkbox labeled 'Reset Configuration to Factory Defaults:'. At the bottom of the form, there is a 'Start' button with a play icon.

Figure 11-7 Upgrade through HTTP

Upgrade through TFTP

Step1. Download firmware file from XonTel website.

Step2. Create a TFTP Server (For example, Tftpd32 on Windows).

- 1) Install Tftpd32 software on computer.
- 2) Configure Tftpd32.

On option “**Current Directory**”, click “**Browse**” button, choose the firmware file (BIN file) upgraded patch.

Figure 11-8 Configure Tftpd32

Step3. Login to XT-800FXO Gateway Web page and go to **System→System Preferences→Firmware Update**, choose “**TFTP Server**”.

- 1) TFTP Server: fill in IP address of Tftpd32 server (your PC's IP address).
- 2) File Name: enter the name of firmware update. It should be a BIN file name.
- 3) Click “Start” to upgrade.

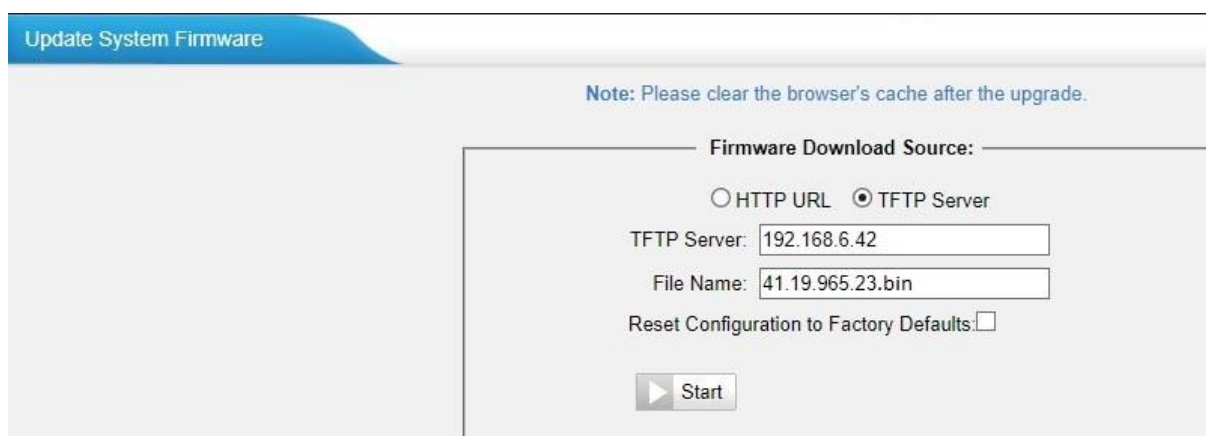

Figure 11-9 Upgrade through TFTP

Backup and Restore

XonTel XT-800FXO Gateway provides Backup and Restore feature, which allows you to create a complete backup of XT-800FXO Gateway configurations to a file.

Notes:

1. When you have updated the firmware version, it's not recommended to restore using an old package.
2. Backup from an earlier version cannot be restored on XT-800FXO Gateway of a later version.

- Create a New Backup

Click  **Create a New Backup** to create a new backup.

- Upload a Backup

Click  **Upload a Backup** to upload a backup.

- Restore

To restore XT-800FXO Gateway configuration data, upload the backup file to

XT-800FXO Gateway and . Reboot the system to take effect.

Please note the current configurations will be overwritten with the backup data.

#	Name	Time	Options		
1	backup_2015may9_174120.tar	Sat May 09 1:41:58 2015			

Figure 11-10 Restore Backup

Reset and Reboot

Users could reset and reboot the system under **System**→ **System Preferences**→ **Reset and Reboot**.

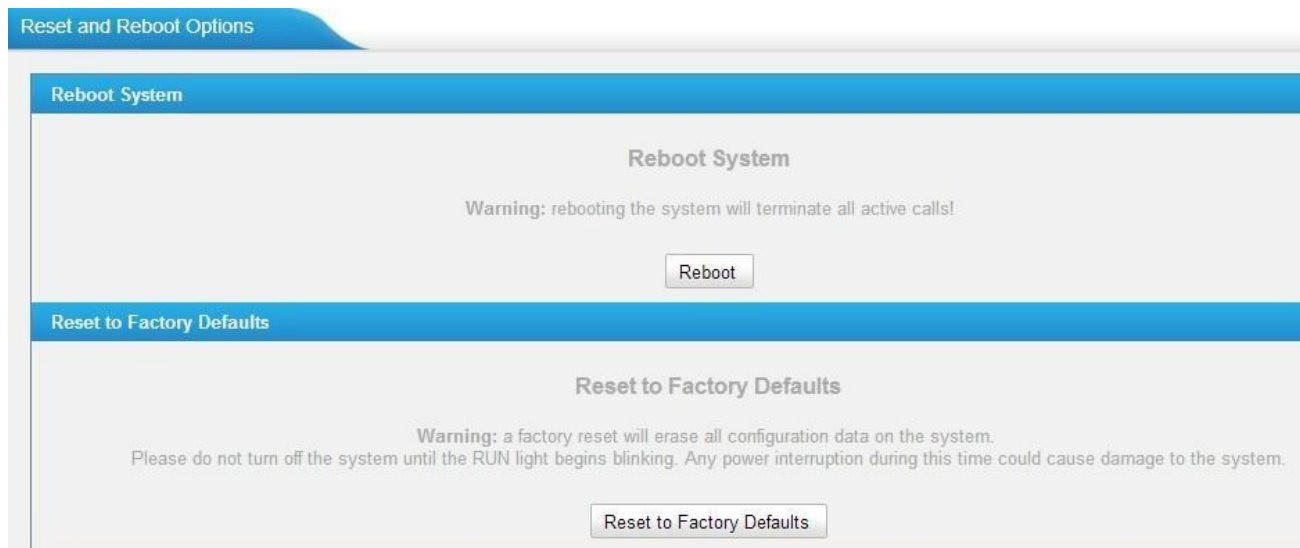

Figure 11-11 Reset and Reboot

Status

Users could check the system status on **Status→System Status**, where FXO Port and trunk Status, Network Status and System Info can be checked.

- Port/Trunk Status
- Network Status
- System Info

Port/Trunk Status

Port/Trunk Status

Port	UP/Down	Available Duration (s)	Status
1	Up	Unlimited	Disconnected
2	Up	Unlimited	Disconnected
3	Up	Unlimited	Disconnected
4	Up	Unlimited	Disconnected
5	Up	Unlimited	Disconnected
6	Up	Unlimited	Disconnected
7	Up	Unlimited	Disconnected
8	Up	Unlimited	Disconnected

Status	Trunk Name	Type	User Name	Hostname/IP	Reachability
No VoIP Trunks Defined					

Status	Account	Type
No Account Defined		

Figure 12-1 Port/Trunk Status

➤ FXO Port Status

Table 12-1 Description of FXO Port Status

Up/Down	
Up	The FXO module works well.
Down	The FXO module is broken.
Available Duration (s)	
The available duration of this PSTN trunk.	
Status	
Idle	The FXO port is idle.
Busy	The FXO port is busy.
Disconnect	There is no line connected to the FXO port.

➤ VoIP Trunk Status

1) SIP/IAX Type

Table 12-2 Description of SIP/IAX Trunk Status

Status	Description
Registered	Successful registration, trunk is ready for use.
Unregistered	Trunk registration failed.
Request Sent	Registering.
Waiting for Authentication	Wrong password.

2) SP-SIP/IAX Type

Table 12-3 Description of SP-SIP/IAX Trunk Status

Status	Description
OK	Successful registration, trunk is ready for use.
Unreachable	The trunk is unreachable.
Failed	Trunk registration failed.

3) VoIP Account

Table 12-4 Description of VoIP Account Status

Status	Description
Registered	The account is registered successfully on the SIP server.
Unregistered	Trunk registration failed.

Network status

In this page, the IP address of LAN port will appear with their status.

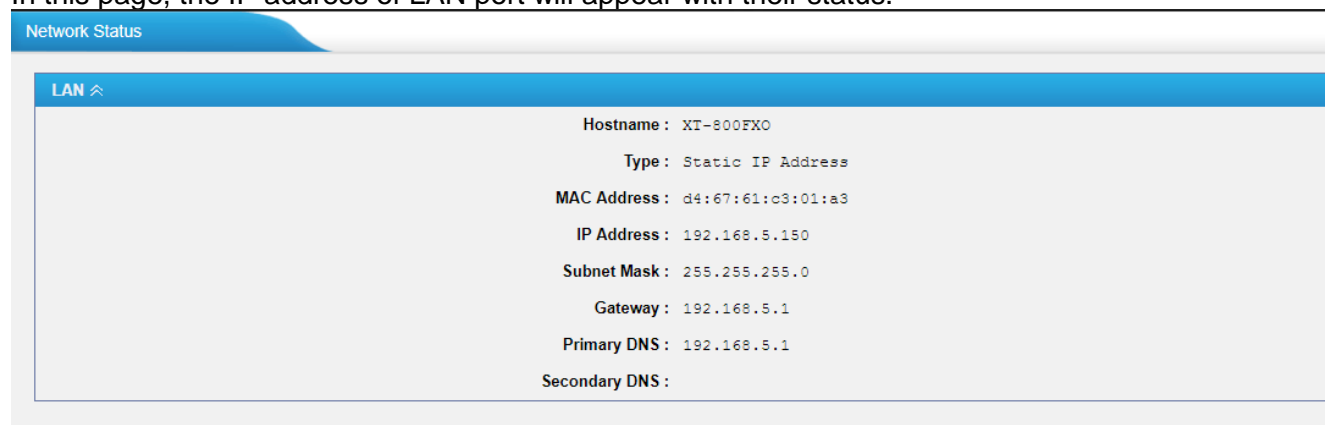

Figure 12-2 Network Status

If your VLAN or VPN are configured, you can check the status in this page also.

System Info

In this page, we can check the hardware/firmware version, or the disk usage of XT-800FXO Gateway.

The screenshot displays the 'System Info' page of the XonTel interface. It features a blue header with the 'System Info' tab selected. The main content area is divided into three sections: General, Disk Usage, and Memory Usage. The General section provides details on the product type, hardware and firmware versions, SN version, and system uptime. The Disk Usage section includes a note about disk space and a table showing flash usage. The Memory Usage section includes a table showing memory usage.

General		
Product Type:	XT-800FXO	
Hardware Version:	V1.00 0000-0000	
Firmware Version:	41.19.965.23	
SN Version:	XT8071700082	
Uptime:	03:44:58 up 5:35, load average: 1.24, 1.06, 1.06	

Disk Usage		
Note: If there is not enough disk space on the system, the oldest call log files will be automatically deleted as necessary.		
Disk Usage:		
	Used/Total(1K-blocks)	use%
flash:	20672/90112	23%

Memory Usage		
Memory Usage:		
	Used/Total(1K-blocks)	use%
Mem:	74768/107796	69%

Figure 12-3 System Info

Reports

Users could check the call logs, system logs on **Status→Reports** page, and use the packet Tool and Port Monitor Tool to capture debug logs from XT-800FXO Gateway.

- [Call Logs](#)
- [System Logs](#)
- [Packet Tool](#)
- [Port Monitor Tool](#)

Call Logs

The call log captures all call details, including call time, caller number, callee number, call type, call duration, etc. An administrator can search and filter call data by call date, caller/callee, trunk, duration, billing duration, status, or communication type.

The screenshot shows the 'Call Logs' interface. At the top, there's a 'Search Condition' section with fields for 'Start Date' (04 Jun 2014), 'End Date' (04 Jun 2014), 'Caller/Callee', 'Trunk' (All), 'Duration', 'Billing Duration', 'Status' (All), and 'Communication Type' (All). A 'Start Searching' button is on the right. Below this are two buttons: 'Download the recordings' and 'Delete the recordings'. To the right, it says 'Total: 39', 'Show: 1-25', and 'View: 25'. Below these is a table with the following data:

Time	Caller	Callee	Source Server/Port	Destination Server/Port	Duration	Billing Duration	Status	Communication Type
2014-06-04 22:05:08	304	*741			11	3	ANSWERED	Internal
2014-06-04 22:02:37	304	huntinggroup1		Port2	2	0	ANSWERED	Internal

Figure 13-1 Call Logs

System Logs

You can download and delete the system logs of XT-800FXO Gateway.

- **Enable Hardware Log**
Save the information of hardware; (up to 4 log files)
- **Enable Normal Log**
Save the prompt information; (up to 16 log files)
- **Enable Web Log**
Save the history of web operations (up to 2 log files)
- **Enable Debug Log**
Save debug information (up to 2 log files)

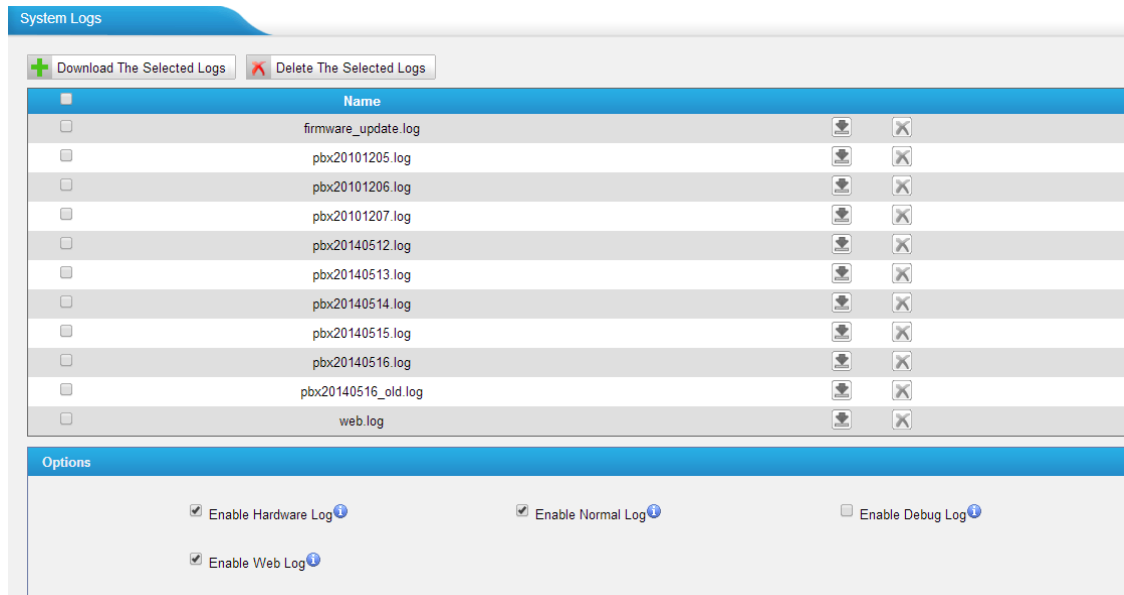

Figure 13-2 System Logs

Packet Tool

This feature is used to capture packets for technician. Integrate packet capture tool “Wireshark” in XT-800FXO Gateway. Users also could specify the destination IP address and port to get the packets.

Figure 13-3 Packet Tool

- **IP**
Specify the destination IP address to get the packets.
- **Port**
Specify the destination Port to get the packets.

Port Monitor Tool

This tool is used to debug a FXO port. Select a FXO port and click “Start” to monitor the FXO port, stop monitoring by clicking “Stop” button.

Figure 13-4 Port Monitor Tool
